

To check the Public IP:

Step 1 : Search "What is my Public IP Address"

The screenshot shows a Google search page with the query "what is my public IP". The search results are as follows:

- Search bar: "what is my public IP"
- Navigation: All, Books, News, Videos, Maps, More, Settings, Tools
- Results: About 1,17,00,000 results (0.60 seconds)
- Snippet 1: "In this case, the router acts like an intermediary that offers a path to the information pouring in through its **public IP** address. Basically, all the devices that are connected to the router are communicating with other **IP** addresses over the Internet from a single **IP** address, i.e. your router's **public IP** address."

What Is My Public IP Address?
Your public IP address is the IP address that is logged by various servers/devices when you connect to them through your internet connection. This is the same IP address that we show on our homepage. So why the secondary page? Well, not everyone speaks the language of IP addresses so we want to make it as simple as possible for everyone to find the information they need. Some even refer to this as their external IP address. Again, it's the same IP we show on our homepage just referred to as something different. Sort of like thingamajig. 🤪
